DETAILED ACTION

Allowable Subject Matter

Claims 1-13 are allowed.

Reasons for Allowance

Claims 1, 11, 12 are allowed since there is no prior art teaches a liquid crystal display comprising a thin film transistor including a source electrode and two drain electrodes, which are located on opposite side of the source electrode. Each of two drain electrodes has

- a near side facing in parallel with the source electrode and being superposed with the gate electrode;
- a far side opposed to and in parallel with the near side and not being superposed with the gate electrode.

Claims 2-10 and 113 are allowed since they depend on the allowed claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

Yasui et al. (US 4762398A) disclose a pixel transistor free of parasitic capacitance fluctuations with two source electrodes and two drain electrodes are aligned between the source bus and the display electrode.

Okabe et al. (US4894690A) disclose the semiconductor film of the TFT being the two source electrodes formed of aluminum simultaneously with the source bus and the two drain electrodes.

Ishikawa et al. (US 6100554 A) disclose (Fig. 1) a high-frequency semiconductor device, three source electrodes 2 extend from a source pad section 1 and two drain electrodes 4 extending from a drain pad section 3 are disposed between the source electrodes 2.
